

Coreless Film technology has arrived!

Coreless stretch film technology is an innovation in environmental source reduction that is very well suited for an eco conscious consumer and organizations with sustainability strategies.

HYBRiD80 Plus

ENGINEERED CORELESS

is a light weight coreless hi-performance stretch film that has been pre stretched to optimize pallet coverage with maximum stability.

Better For the Environment: Eliminates paperboard core, film is 100% recyclable, reduced energy consumption in transportation & storage costs from reduced roll diameter & case cube.

Improved Ergonomics: Reusable ergonomic plastic dispenser (supplied) is effortlessly switched from one roll to the next, ending the hot hands and fingers typically associated with traditional cardboard cores.

No core means roll weight is reduced by up to 15%, reducing strain on the user.

Freight & Warehouse Savings: More rolls/cases per pallet means lower transportation & storage costs.

Less Waste: No wasted film left on the core. Every last foot of stretch film is utilized.

Cost Effective: All coreless items are lower cost than the comparable "cored" products.

Reduce Storage & Disposal Costs: No cardboard core means no associated storage or disposal costs.
